Program Committee Co-Chairs:

Prof. Bassam Dally
King Abdullah University of Science
and Technology
Saudi Arabia

Prof. José L. Torero
University College London
United Kingdom

Dear Colleague,

One of the critical phases of executing a successful International Symposium on Combustion is the paper review process. We are honored to invite you to contribute to this process as a reviewer for the 40th International Symposium in 2024. In accepting this role, we will implore you to complete as many reviews as possible. This is important because over 4000 reviews will need to be performed in the span of approximately four weeks.

Please register as a reviewer by completing the [Reviewer Google Form](#). If you have trouble accessing the Google Form, you can complete and email a completed **PDF** version, which is available on [The Combustion Institute website](#). Please complete all portions of the form, as these responses will provide information to the Colloquium Co-Chairs (CCCs) who may be unfamiliar with your research and allow them to assign papers to best utilize your expertise. Forms should be completed by **30 August 2023**. We encourage you to review the colloquia titles and descriptions for the 40th Symposium, as there have been some slight changes. These changes are available for review in the [40th ISOC Call for Papers](#).

Additionally, please keep the following schedule in mind when you are deciding the total number of reviews you can complete. The deadline for paper submissions is 4 December 2023. The CCCs will begin to assign reviewers at the end of December 2023, and completed reviews will be due by **28 January 2024**. This framework provides reviewers with four weeks to complete their reviews. It is critical that all reviews are received within this timeframe, so all authors receive the reviews at the same time.

Once the review process begins, the CCs and CCCs will be looking to pinpoint the strengths and weaknesses of each paper. Your detailed comments will be used by the colloquium teams to determine if a paper should be recommended for presentation at the 40th Symposium. Given the importance of these reviews, superficial and/or very short reviews may be disregarded.

Finally, if you would like to recommend someone to serve as a reviewer, please email their name and email address to the CI Office at office@combustioninstitute.org. Being able to increase the reviewer pool will help the CCCs ensure that each paper receives three independent reviews. Thank you for dedicating your time and expertise to help maintain the high standards of the International Symposium on Combustion.

With best regards,

Dr. Bassam Dally and Dr. José L. Torero
